## ABSTRACT

This "research paper" says that 'Element Therapy' can cure all kinds of diseases in humans. It's useful to revive the dead humans. It's also useful to create a shortage of organs or a shortage of parts of the human body into humans' bodies naturally. It's useful to return back the old state of humans to the young state of humans. We need to examine and determine first the level of different kinds of elements in human patients' bodies and at the same time, we need to examine and determine the level of different kinds of elements in a healthy and young human's body also. We need to balance the level of different kinds of elements in human patients' bodies according to the exact level of different kinds of elements in the healthy and young human bodies. If the lab report shows the level of any/some kind(s) of element(s) lower in a human patient's body then we need to supply the exact kind(s) of element(s) with the exact amount(s) from our store into human patient's body with a view to cure disease. If the lab report shows the level of any/some kind(s) of element(s) higher in human patients' bodies then we need to remove the exact kind(s) of a higher level of element(s) with the exact amount(s) from human patients bodies permanently with a view to cure disease. Sometimes at the same time lab report may show levels of elements both lower and higher in case of lower we need to supply the exact kind(s) of element(s) with the exact amount(s) from our store into human patients' bodies with a view to cure disease and in case of higher we need to remove exact kind(s) of a higher level of element(s) with the exact amount(s) from human patients bodies permanently at the same time with a view to cure disease.

**Keywords:** Element Therapy, Acupuncture, Human-patient's body

## Introduction

Before applying 'Element Therapy' in the treatment of any cancer disease in a human patient's body we need to examine and determine the level or percentage of all different kinds of elements of human patient's body who is suffering from any cancer disease. At the same time we need to examine and determine level or percentage of all different kinds of elements of 'healthy and young' any human's body also. We need to balance the level or percentage of elements in a human patient's body who is suffering from any cancer disease according to the exact level or percentage of elements of a 'healthy and young' human body. If lab report shows us level or percentage of any/some kind(s) of element(s) lower into human-patient's body who is suffering from any kind of cancer disease then we need to supply exact kind(s) of element(s) with exact amounts into human-patient's body who is suffering from any kind of cancer disease, this principle is considered here as principle [1]. If lab report shows us level or percentage of any/some kind(s) of element(s) higher into human-patient's body who is suffering from any

kind of cancer disease then we need to remove permanently the exact kind(s) of element(s) with exact amounts from the human-patient's body who is suffering from any kind of cancer disease, this principle is considered here as principle [2]. Some time at the same time lab report may show us level or percentage of elements into human-patient's body both lower and higher in such condition in case of lower we need to follow principle [1] and in case of higher we need to follow principle [2].

## Literature Review

“Therapy” is related to cure all kinds of diseases of humans and it’s also helpful to revive the dead humans. Before applying this therapy we need to examine and determine level or percentage of all different kinds of elements of a human-patient's body as lower or higher or at the same time both lower and higher. At the same time we need to examine and determine level or percentage of all different kinds of elements of a 'healthy and young' human's body also. It’s possible by existing method. We need to balance the imbalance of elements into human-patient's body according to exact level or percentage of all different kinds of elements of the 'healthy and young' human's body. Principles of Element Therapy : If lab report shows us level or percentage of any/some kind(s) of element(s) lower into human-patient's body then we need to supply exact kind(s) of lower element(s) with exact amounts into this human-patient's body , this principle is considered here as principle [1]. If lab report shows level or percentage of any/some kind(s) of element(s) higher then we need to remove permanently exact kind(s) of higher element(s) with exact amounts from the human-patient's body , this principle is considered here as principle [2]. Some time at the same time lab report may show us level or percentage of different elements into human-patient's body both lower and higher, in case of lower we need to follow principle [1] and in case of higher we need to follow principle [2].

Proposed theory which is related to revive the dead humans: We can revive the dead humans by the help of 'law of conservation of energy' and 'Element Therapy'. With a view to convert the dead body of humans into an alive body of humans we need to add 37° C. heat temperature into dead body of humans. This temperature has capability to convert the dead body of humans into the alive bodies of humans. After it as soon as we need to connect this alive human-patient's body to artificial life support system. Now we need to examine and determine level or percentage of all different kinds of elements of this alive human-patient's body according to existing method. At the same time we need to examine and determine

level or percentage of all different kinds of elements of a 'healthy and young' any human's body also. With a view to develop like a 'healthy and young' human we need to balance level or percentage of all different kinds of elements into this alive human-patient's body according to exact level or percentage of all different kinds of elements of the 'healthy and young' any human's body. If lab report shows us level or percentage of any/some kind(s) of element(s) lower into this alive human-patient's body then we need to supply exact kind(s) of lower element(s) with exact amounts into this alive human-patient's body , this principle is considered here as principle [1]. If lab report shows us level or percentage of any/some kind(s) of element(s) higher into this alive human-patient's body then we need to remove permanently the exact kind(s) of higher element(s) with exact amounts from this alive human-patient's body , this principle is considered here as principle [2]. Some time at the same time lab report may show us level or percentage of elements into this alive human-patient's body both lower and higher in such condition in case of lower we need to follow principle [1] and in case of higher we need to follow principle [2].

Other more helpful materials: Atoms of all kinds of elements are alive things because the dead things cannot create alive things like humans. Breathing and flowing of blood aren't applicable to all kinds of alive things for example all atoms of all kinds of elements are alive things but they do not need blood to flow and breathing to exist as alive , they can exist as alive things without breathing and flowing of blood into their bodies. So that when the law of conservation of energy converts a dead body of human into an alive body of human the flowing of blood and breathing may not be occurred without existence of activities of breathing and flowing of blood a dead body of a human may be converted into an alive body of human. But a dead body of human decomposes an alive body of human doesn't decompose.

The law of conservation of energy when converts the dead body of human into an alive body of human this conversion may make active the flowing of blood and breathing activities into body of this alive human. If it would be happen then there is no any problem to develop this alive human as a healthy human like other healthy people of human society by the application of my hypothesis "Element Therapy". When the law of conservation of energy converts the dead body of human into an alive body of human the flowing of blood and breathing activities may not be occurred, without existence of activities of breathing and flowing of blood, a dead body of human may be converted into an alive body of human. We can understand that it is an alive body of human by its nature because it doesn't decompose like a dead body of human. In such case we can try "Acupuncture" treatment with a view to make active the flowing of blood and breathing activities into this alive human body. After it we need to apply my

hypothesis "Element Therapy" to develop this alive human body as a healthy human like other healthy people of human society.

When the law of conservation of energy converts a dead body of human into an alive body of human, the dead body of human may be converted into an alive body of human without flowing of blood and breathing activities. I think that there must be existence of blood into this alive human body in blockage (stoppage) condition. We can apply as alternative if Acupuncture treatment doesn't work at that time we need to try to start the blockage (stoppage) condition's blood circulation into this alive human body by the help of an artificial machine. If blood circulation happens into this alive human body then after it we need to apply my hypothesis "Element Therapy" as next treatment with a view to develop this alive human-patient as a healthy human like other healthy people of human society.

Different kinds of diseases which are related to aging of humans as a whole we know as AGING and it makes humans old. Is/are AGING or different kinds of diseases which are related to aging of humans is/are curable? Yes, aging or different kinds of diseases which are related to aging of humans is/are curable. By what method we can cure aging? We can cure aging by the application of 'Element Therapy'. Application of 'Element Therapy' in treatment of aging: We can return back the old humans into the young humans. For it we need to balance level of different elements into bodies of the old humans according to exact level of elements of 'healthy and young' any human's body. We again can keep the young state of any human for a long period of time and again we need to balance level of elements after a long period of time into bodies of the humans according to previous record of level of elements of the 'healthy and young' any human's body. Thus we can protect the humans from becoming old.

Fulfilment of shortage organs or shortage parts of humans' bodies: New hands, new feet, new eyes, new tongue, etc. etc. can be fulfilled again and again naturally into human-patients' bodies in the place of shortage organs or shortage parts of humans' bodies by the application of 'Element Therapy'. How? For it we need to examine and determine level of all different kinds of elements of human-patients' bodies and at the same time we need to examine and determine level of all different kinds of elements of a 'healthy and young' any human's body. Now we need to balance level of all different kinds of elements into human-patients' bodies according to exact level of different kinds of elements of 'healthy and young' human's body. As soon as the acts of creation of the shortage organs or shortage parts of human-patients' bodies as examples new hands, new feet, new eyes, new tongue, etc. etc. begin. During this creation's time we need to check level of

elements of human-patients' bodies time to time. If we find here imbalance then as soon as we need to balance that imbalance according to previous record of level or percentage of different elements of the 'healthy and young' any human's body. Thus we can create by the application of 'Element Therapy' the shortage organs or shortage parts of human-patients' bodies. All those organs may take different period of time to complete their creations. So we need to check level or percentage of different elements of human-patients' bodies time to time if we find imbalance then as soon as we need to balance according to previous record of level or percentage of different elements of the 'healthy and young' any human's body.

## **Evaluation and Suggestions**

At first before applying this therapy into any human-patient's body we need to test it into mice's bodies. Before applying this therapy into mice's bodies we need to examine and determine level or percentage of all different kinds of elements of a mouse-patient's body. At the same time we need to examine and determine level or percentage of all different kinds of elements of the 'healthy and young' any mouse's body also. We need to balance level or percentage of elements into mouse-patient's body according to exact level or percentage of elements of the 'healthy and young' mouse's body. Suppose we have found 4% lower level or percentage of Carbon into mouse-patient's body. Now we need to balance the 4% lower level or percentage of Carbon into mouse-patient's body. What exact amounts of Carbon do we need to balance the 4% lower level or percentage of Carbon into mouse-patient's body? 2nd time's testing can show us about what amounts of Carbon need to balance the 4% lower level or percentage of Carbon into mouse-patient's body. We can supply into mouse-patient's body first time less amounts than 4% of Carbon or we can supply into mouse-patient's body first time equal amounts of 4% Carbon from our store. We have supplied first time suppose 2g Carbon from our store into mouse-patient's body , 2nd time's testing has showed us that this 2g Carbon becomes capable to balance 2% lower level or percentage of Carbon into this mouse-patient's body. We have become capable to know that 1g Carbon has capability to balance 1% lower level or percentage of Carbon into mouse-patient's body. Suppose we have found 12% higher level or percentage of Oxygen into mouse-patient's body. Now we need to balance 12% higher level or percentage of Oxygen into this mouse-patient's body. For it we need to disconnect some cells (by surgery) from this mouse-patient's body.

And we need to measure different percentage of all different kinds of elements of those disconnected cells. Suppose into those 100g's disconnected cells we have found 24% Nitrogen, 26% Iron, 23% Carbon, 12% Oxygen and 15% Hydrogen. Now we need to convert 24% Nitrogen, 26% Iron, 23% Carbon, 12% Oxygen and 15% Hydrogen into weight. Atomic mass and atomic weight are equal to 24% Nitrogen = 24g Nitrogen, 26% Iron=26g Iron, 23% Carbon= 23g Carbon, 12% Oxygen=12g Oxygen and 15% Hydrogen=15g Hydrogen. Now we need to supply from our store 24g Nitrogen, 26g Iron, 23g Carbon and 15g Hydrogen into this mouse-patient's body. Again we have supplied for testing 6g Oxygen from our store into this mouse-patient's body. 2nd time's testing has showed us that there is now 6% higher level of Oxygen into mouse-patient's body. We have found that 1g Oxygen has capability to balance 1% higher level of Oxygen into mouse-patient's body. By the help of this knowledge we can balance in the first time imbalance level of elements into human-patients' bodies.

The disconnected cells (by surgery) of mouse-patient's body or human-patient's body only help us like this 1. It helps us to know different percentage of different kinds of elements by which elements the disconnected cells are made up of. 2. It helps us by providing weight of the disconnected cells, this weight is most important to determine different percentage of all different kinds of elements of disconnected cells. 3. It helps us to remove permanently higher level or percentage of any/some kind(s) of element(s) from human-patient's body or mouse-patient's body.

What amounts of cells (in grams) do we need to disconnect (by surgery) from human-patient's body to balance 12% higher level or percentage of any/some kind(s) of element(s) into human-patient's body ? We get its scientific information's from testing of 'Element Therapy' into mice's bodies. After successful this testing into mice's bodies only then we needs to apply it into any human's body.

We can supply into mouse-patient's body or human-patient's body all kinds of gaseous elements each kind as liquid as injection and other all different kinds of elements except all different kinds of gaseous elements each kind as powder as injection as well as here we can mix water (water which is used for injection) because water never affects level or percentage of elements of mouse-patient's body and human-patient's body.
